

GGL DIAMOND CORP.

MANAGEMENT'S DISCUSSION AND ANALYSIS

February 28, 2009

GGL DIAMOND CORP.

Management's Discussion and Analysis

**For the Three Months ended February 28, 2009
Information as of April 27, 2009 unless otherwise stated**

The following discussion of the results and financial position of the Company for the period ended February 28, 2009 should be read in conjunction with the November 30, 2008 and February 28, 2009 Consolidated Financial Statements and related notes. The information reported here includes events taking place subsequent to the end of the fiscal period, up to and including April 27, 2009.

DISCUSSION AND ANALYSIS

GGL – The Gold Play

A summary of our gold prospects: Back to our roots

The current worldwide financial crisis and global recession are spawning a lack of trust in paper currencies, which, in conjunction with current and anticipated inflationary factors, have resulted in a demand for precious metals; in particular, gold and silver markets continue to be robust. In terms of gold exploration, some recent announcements about financings and joint ventures are causing increased optimism.

GGL's Providence Greenstone Belt (PGB) has been shown to be a potential source for diamonds, nickel and VMS base metal deposits. Given the economic situation, however, it is our prospects for gold on the PGB which must command our attention. Our current gold properties, as well as new gold discoveries, should take precedence while we maintain our base metal and diamond prospects.

GOLD PROPERTIES – PROVIDENCE GREENSTONE BELT

Two new discoveries with high-grade gold assays on our PGB Property have provided an exciting start for GGL. The first discovery, only four km from our 20-person ZIP base camp, was discovered by a GGL geologist late in 2007, who was examining the cause of a weak airborne electromagnetic anomaly and took a grab sample. The sample collected assayed 0.66 oz/ton (ounces per ton) gold, a result that was received after the 2007 exploration season was over.

In mid-2008, the area was examined and mapped. Although most of the area is covered by glacial till and only about 10% of the area features exposed bedrock, this was sufficient to note that it reflected a similar geologic setting to the Red Lake gold camp in Ontario.

A second sample, collected in 2008 some 300 meters south-southeast of the first discovery, returned an assay of 0.81 oz/ton gold. An airborne magnetic anomaly associated with this north-northwest trending gold area can be traced for a kilometer both north and south of the discovery. A subtle electromagnetic anomaly is within the magnetic anomaly.

In 2008, Aurora Geosciences Ltd. ("Aurora") of Yellowknife was engaged to evaluate the PGB property for both base metals and gold. As a result of the Aurora evaluation, we have designated four gold prospects as having high priority for follow-up work and are preparing a budget for the 2009 season.

The second new gold discovery was made late in the 2008 season near the shore of a small lake 10 km east of ZIP base camp. The first grab sample assayed 1.245 oz/ton gold and a 0.55 meter channel sample in the same area returned 0.58 oz/ton gold. A sample collected across the lake 125 meters to the north assayed 0.18

oz/ton gold. As a result of the sample results and our assessment of the geology, this area has become a high priority exploration target and will form part of the proposed 2009 exploration program.

The third new gold area is located near the southern property boundary 40 km south of our camp, and where mineralization has been traced intermittently for 5 km. A sample collected in the northern section of this area returned 1.36 grams per tonne (0.039 oz/ton) gold. Although no significant gold assays have been returned from the southern section of the same area, it is an intriguing result requiring further study. There is very little bedrock exposed in the area but a weak electromagnetic conductor is coincident with a shear zone which extends through both of the above showings. One of Aurora's most experienced consultants regards the gold potential of this area as highly promising.

The fourth area is located 40 km north of ZIP camp near the northern property boundary. Previous mapping and ground geophysical surveys traced a banded iron formation for 4 km. Here, channel samples yielded values of up to 4.11 grams/tonne (0.12 oz/ton) gold and two grab samples from boulders yielded 11.66 grams/tonne (0.34 oz/ton) and 17.93 grams/tonne (0.52 oz/ton) gold. The source of these two high grade boulders was not found.

The best sample from our 2008 exploration work contained 3.5 grams/tonne (0.102 oz/ton) gold and 11.95% arsenic. The Aurora crew also identified a second, larger banded iron formation carrying anomalous gold values in an area that warrants significant further work. Banded iron formations are well recognized hosts for gold both in the Slave Craton and in greenstone belts of the Superior Province in Ontario and Quebec.

GOLD PROPERTIES – MCCONNELL CREEK

The Company's most advanced gold property is the McConnell Creek gold property in British Columbia, acquired in 1981 from the prospectors – Jack Gerlitzky and John Leontowich - who discovered the gold and named the property after themselves, Gerle Gold -- a name still reflected in our stock symbol GGL.

They staked the first claims in 1947, and in that same year Dr. Bill White of the BC Department of Mines wrote a report on the gold showings and described a strong shear zone up to 50 feet in width. He took 12 channel samples which returned assays ranging from trace to 4.41 oz/ton gold. It was this report that first drew our attention to the property.

Gerle Gold Ltd. (now GGL Diamond Corp.) began work in 1981, after other companies and the BC Department of Mines did some preliminary exploration on the property. This work traced the shear zone identified in previous exploration for 2 km by mapping, and for a total length of 12 km and a width of up to 800 meters, by geophysics.

Subsequently, a number of holes were drilled with some encouraging results but the price of gold was falling and began to recover only in 1987-88 when GGL undertook a trenching and drilling program.

A weighted average of gold values was calculated for a series of gold bearing trenches over widths ranging from one to six meters. Two zones of better gold grades were identified by this sampling. One zone, with a strike length of 145 meters (475 feet) and an average width of 1.8 meters (5.6 feet), averaged 6.79 grams/tonne (0.211 oz/ton) gold. The second zone, traced over a strike length of 30 meters (100 feet) and ending in overburden too thick to trench by hand, averaged 6.79 grams/tonne (0.198 oz/ton) gold over a width of 1 meter (3 feet). The last trench at the edge of deep overburden contained values of 8.0 grams/tonne (0.232 oz/ton) gold over a width of 1.8 meters (5.9 feet).

Various diamond drilling programs within the area of trenching traced the gold mineralization to depths of 250 meters.

In 1990 Placer Dome optioned the property from GGL and attempted trenching of the shear zones in the area of extensive overburden. Few of these trenches encountered bedrock but several widely spaced drill holes

were completed and one of these returned 5.25 grams/tonne (0.153 oz/ton) gold over a hole length of 2.25 meters. This intercept, from a subsidiary shear zone west of the main zone hosting the previously described zones of better gold grades, suggests the possibility of enhanced gold grades not only along the known 12 kilometers strike of the main zone but also within the 800 meters width of the shear zone system. Gold values from soil samples collected over the entire shear zone system include many ranging from 200 to 2000 ppb (parts per billion where 1000 ppb = 1 gram), indicative of the significant potential of the system.

The McConnell Creek Gold property has many characteristics of a significant underground (or possibly an open pit) gold deposit but requires extensive additional exploration to define the economic potential of the property.

From 1992 and for the better part of ten years, the politics in British Columbia discouraged investment in mineral exploration. Today, not only is the political climate better but the gold price is high and existing infrastructure includes all weather road access and a hydro electric power line within 11 km of GGL's property.

The shear zone at McConnell is developed in an amphibolite derived from mafic (basalt) volcanics. This geological unit is unique in that it is significantly older than most of the rocks in this part of British Columbia, being Pennsylvanian to Permian in age. This is in contrast to the copper-bearing zones at the McConnell Property which are hosted by younger (Jurassic and Cretaceous) intrusive rocks and Takla volcanics of late Triassic age.

Limited Operating History: Losses

The Company has experienced, on a consolidated basis, losses in all years of its operations and expects to incur losses for the foreseeable future. There can be no assurance that the Company will operate profitably in the future, if at all. As at February 28, 2009, the Company's deficit was \$19,070,277.

Price Fluctuations: Share Price Volatility

In recent years, the securities markets in the United States and Canada have experienced a high level of price and volume volatility, and the market price of securities of many mineral exploration companies have experienced wide fluctuations in price which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. In particular, during the period March 1, 2008 to February 28, 2009, the per share price of the Company's shares fluctuated from a high of \$0.27 to a low of \$0.02. There can be no assurance that continual fluctuations in price will not occur.

Shares Reserved for Future Issuance: Dilution

As at February 28, 2009, there were 10,288,333 stock options outstanding pursuant to which shares may be issued in the future, all of which will result in further dilution to the Company's shareholders and pose a dilutive risk to potential investors.

Stock Option Plan

The Company has a 10% rolling Stock Option Plan whereby the Company may grant stock options to purchase up to 10% of the issued capital of the Company at the time of the grant of any option. Under the policies of the TSX Venture Exchange, options granted under the 10% rolling plan will not be required to include the mandatory vesting provisions required by the Exchange for fixed number stock option plans, except for stock options granted to investor relations consultants. Under the 10% rolling plan, the number of shares available for grant increases as the issued capital of the Company increases. Awarded stock options are exercisable over a period not exceeding five years at exercise prices determined by the Board of Directors.

No options were granted during the period ended February 28, 2009.

Corporate Governance

The Company has a Corporate Disclosure Policy, an Insider Trading Policy and a Whistle Blower Policy. To view a copy of these policies, please go to www.ggldiamond.ca.

Overall performance/results of operations

As at February 28, 2009, the Company had incurred exploration costs on mineral properties of \$98,912; licences, recording fees and lease payments \$10,965; salaries and wages \$7,093; surveys \$45; technical and professional services \$74,874; transportation \$2,711 and project supplies of \$3,224). Exploration costs for the period ended February 28, 2009 are lower than 2008 by \$365,434 a decrease of 79%. Exploration costs were lower in 2009 than 2008 for all categories of expenditures.

During the period ended February 28, 2009, the Company had minimal exploration work due to low funds compared to February 29, 2008. In December 2007, the Company had completed a large private placement of over \$4,000,000.

On a per project basis, the Company spent the \$98,912 exploration costs as follows: \$22,026 on the CH project (see Resource Properties regarding a payment of \$25,000 received), \$10,021 on the Doyle Lake project, \$4,180 on the McConnell Creek, \$3,207 on the Fishback Lake Property and \$59,478 on the Providence Greenstone Belt.

The Company reported a net loss of \$197,767 for the period ended February 28, 2009 compared to net income of \$615,021 for the period ended February 29, 2008. In 2008 there was net income as a result of a future tax recovery number that was greater than the net loss before taxes. General administration and exploration expenses for the period ended February 28, 2009 were \$34,250 compared to \$255,294 for the same period ended February 29, 2008 (a decrease of 87% from 2008 to 2009). The Company has reduced its expenses in 2009 to help preserve capital during the current economic conditions. The change in general administration and exploration expenses was primarily due to a decrease in consulting fees (2009-\$14,062; 2008-\$97,260); legal and audit fees (2009-\$2,786; 2008-\$16,118); licences, taxes and insurance (2009-\$8,771; 2008-\$14,137), office services and expenses (2009-\$45,434; 2008-\$57,276) and general exploration costs (2009-\$38,219; 2008-\$54,493).

General exploration costs are negative during the period ended February 28, 2009 due to the receipt of \$100,000 for a non-exclusive licence agreement to use the Company's Slave Geological Province data set for diamond exploration.

Revenue for the period ended February 28, 2009 was \$230,452 (\$84 of interest income and a gain on the sale of property and equipment of \$230,368). Revenue for the period ended February 29, 2008 was \$32,283 of interest income. The 2009 increase was the result of the sale of the Yellowknife house and the non-exclusive licence agreement to use the Company's Slave Geological Province data set for diamond exploration.

Acquisition and Disposition of Resource Properties and Write offs

During the period ended February 28, 2009, the Company relinquished 16 (15,818.10 acres) Doyle Lake mining leases. These are separate from the Doyle Lake Properties which are under the De Beers Agreement dated May 25, 1995 and the mining leases acquired in 2005 from Mountain Province Diamonds Inc., Camphor Ventures Inc., and De Beers Canada Inc. The relinquished leases do not include the Doyle diamond-bearing kimberlite sill which is 100% owned by GGL.

Resource Properties

The Company signed an exploration and option agreement on 73 of its 121 CH claims in the Northwest Territories. Kennecott Canada Exploration Inc. must make payments totaling \$1,000,000 and incur cumulative expenditures of \$10,000,000 in order to earn a 100% interest, subject to a gross overriding royalty of 1.5% of the appraised value of all gem and industrial diamonds recovered, sorted and graded from the property and a 1.5% net smelter returns royalty on the net value of all ores, minerals, metals and materials except diamonds, mined and removed from the property and sold or deemed to have been sold. The payments and both royalties are payable to the Company. The Company has received the first payment of \$25,000.

Related Party Transactions

During the three months ended February 28, 2009, the Company was billed \$14,063 (February 29, 2008 – \$26,185) by one director for consulting fees and \$23,437 (February 29, 2008 - \$6,315) for technical and professional services. As at February 28, 2009, \$113,330 was included in accounts payable for services rendered in 2008 to February 28, 2009 (February 29, 2008 - \$9,863).

Commitments

In 2006, the Company entered into a three-year operating lease agreement with respect to its office premises and acquired additional office space for three years. Both leases end June 30, 2009 and the minimum payment required under the agreement is \$39,722 in 2009.

Management of Capital

The Company's objectives when managing capital are to safeguard its ability to continue as a going concern in order to pursue the development of its mineral properties and to maintain a flexible capital structure which optimizes the costs of capital at an acceptable risk.

In the management of capital, the Company includes the components of shareholders' equity as well as cash and cash equivalents.

The Company manages the capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust its capital structure, the Company may attempt to issue new shares, issue new debt, acquire or dispose of assets or adjust the amount of cash and cash equivalents.

In order to maximize ongoing development efforts, the Company does not pay out dividends.

The Company's common shares are listed on the TSX Venture Exchange ("TSX-V"). The TSX-V's policies impose certain minimum capital requirements upon the Company. Due to current market conditions, the TSX-V is granting temporary relief from certain policy requirements on a case by case basis to listed issuers which are facing conditions of immediate or imminent financial hardship. The temporary relief period will expire September 30, 2009. The Company has applied to the TSX-V and received approval for temporary relief from the minimum six month working capital requirement.

Critical Accounting Policies

New accounting policies were introduced in 2009.

Adoption of New Accounting Policies

Current Changes in Accounting Policies

(a) Goodwill and Intangible Assets, Section 3064

The CICA issued the new Handbook section 3064, “Goodwill and Intangible Assets”, which will replace section 3062, “Goodwill and Intangible Assets”. The new standard establishes revised standards for the recognition, measurement, presentation and disclosure of goodwill and intangible assets. The new standard also provides guidance for the treatment of preproduction and start-up costs and requires that these costs be expensed as incurred. The new standard applies to annual and interim financial statements relating to fiscal years beginning on or after October 1, 2008.

(b) Going Concern – Amendments of Section 1400

CICA 1400, General Standards of Financial Statements Presentation, was amended to include requirements to assess and disclose an entity’s ability to continue as a going concern. The new requirements are effective for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2008.

Future Changes in Accounting Policies

International Financial Reporting Standards (“IFRS”)

In 2006, the Canadian Accounting Standards Board (“AcSB”) published a new strategic plan that will significantly affect financial reporting requirements for Canadian companies. The AcSB strategic plan outlines the convergence of Canadian GAAP with IFRS over an expected five year transitional period. In February 2008 the AcSB announced that 2011 is the changeover date for publicly-listed companies to use IFRS, replacing Canada’s own GAAP. The date is for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011. The transition date of December 1, 2011 will require the restatement for comparative purposes of amounts reported by the Company for the year ended November 30, 2011. While the Company has begun assessing the adoption of IFRS for 2011, the financial reporting impact of the transition to IFRS cannot be reasonably estimated at this time.

Please see Notes 2 and 3 of the Consolidated Financial Statements for the year ended November 30, 2008 for a complete listing of accounting policies followed by the Company.

Summary of Quarterly Information

The following table sets forth a comparison of revenues and earnings for the previous eight quarters ending with February 28, 2009. Financial information is prepared according to GAAP and is reported in Canadian \$.

<u>Quarter Ended:</u>	February 28, 2009	Nov. 30 2008	August 31, 2008	May 31, 2008	February 28, 2008	Nov. 30, 2007	August 31, 2007	May 31, 2007
	(\$)	(\$)	(\$)	(\$)	(\$)	(\$)	(\$)	(\$)
Total Revenues	230,452	14,681	8,440	21,144	32,283	23,805	15,893	12,358
Net Income								
(Loss)	(197,767)	(176,302)	359,815	(1,463,445)	615,021	(374,273)	(1,923,243)	(868,387)
Net income								
(loss) per share	(0.001)	(0.000)	0.003	(0.011)	0.005	(0.003)	(0.016)	(0.008)

Note:

(1) Income (loss) before discontinued operations and extraordinary items is the same as Net Income (Loss) as there are no discontinued operations or extraordinary items in 2009 or 2008. Fully diluted earnings (loss) per share are not presented as the exercise of warrants and stock options would be anti-dilutive.

During the year, management decides which properties will be retained and which properties will be abandoned based on results from work performed during the field season and the analysis of sample assays. Properties that will be abandoned are written off when management makes its decision to cease any further work (usually in the third and fourth quarters) which will increase the Net Loss.

Liquidity and Capital Resources

The Company does not have operating revenues and must finance its exploration activity by raising funds through joint ventures or equity financing. The exploration and subsequent development of the Company's properties depend on the Company's ability to obtain required financing. There is no assurance that additional funding will be available to allow the Company to fully explore its existing properties. The Company requires sufficient funds to complete further exploration work (see Management of Capital). Failure to obtain financing could result in delays or indefinite postponement of further exploration and the possible, partial or total loss of the Company's interest in certain properties.

The Company is dependent on raising funds by the issuance of shares or disposing of interests in its unproven mineral interests (by options, joint ventures or outright sales) in order to finance further acquisitions, undertake exploration and development of mineral interests and meet general and administrative expenses in the immediate and long term. There can be no assurance that the Company will be successful in raising its required financing.

The Company's financial performance is dependent on many external factors. The Company expects that any revenues it may earn from its operations in the future will be from the sale of minerals. Both prices and markets for metals and minerals are cyclical, difficult to predict, volatile, subject to government price fixing and controls and respond to changes in domestic and international, political, social and economic environments. In addition, the availability and cost of funds for exploration, development and production costs are difficult to predict. These changes in events could materially affect the financial performance of the Company.

The Company had working capital of \$92,616 at February 28, 2009 compared with a deficit of \$216,841 as at November 30, 2008. The Company's current assets exceeded its current liabilities at February 28, 2009. The Company has no material income from operations and any improvement in working capital results primarily from the issuance of share capital.

For the period ended February 28, 2009, the Company experienced negative cash flow of \$21,731 (2008 - \$216,170) (before allowing for changes in non-cash operating working capital balances) from operating activities. Changes in operating activities resulted primarily from a decrease in all administration costs and the receipt of funds for a non-exclusive licence agreement to use the Company's data set. (See Overall performance/results of operations for further information.)

The Company's cash position as at February 28, 2009 was \$378,053 (November 30, 2008 - \$332,665). The increase in cash position compared to November 30, 2008 was due principally to the sale of the Yellowknife house and the licensing agreement with Kennecott.

During the period ended February 28, 2009:

- (a) 2,500,000 warrants expired unexercised; and
- (b) 735,000 stock options expired unexercised.

At February 28, 2009, the Company had the following share purchase warrants outstanding:

Number	Exercise Price	Expiry Date
230,000	\$0.175	March 7, 2009
2,855,000	\$0.30/\$0.40	Aug.13, 2010
20,000	\$0.30/\$0.40	Aug.18, 2010
3,105,000		

See Notes 5 and 6 of the Consolidated Financial Statements for February 28, 2009.

Subsequent Events

Subsequent to February 28, 2009, the following occurred:

- (a) 330,000 stock options expired unexercised.
- (b) 230,000 share purchase warrants expired unexercised.

Outstanding Share data as at April 27, 2009:

- (a) Authorized and issued share capital:

Class	Par Value	Authorized	Issued Number
Common	No par value	Unlimited	144,607,025

- (b) Summary of options outstanding:

Security	Number	Exercise Price	Expiry Date
Options	300,000	\$0.20	May 12, 2010
Options	50,000	\$0.20	June 7, 2010
Options	210,000	\$0.20	July 8, 2010
Options	25,000	\$0.20	October 28, 2010
Options	775,000	\$0.20	March 23, 2011
Options	495,000	\$0.26	May 12, 2011
Options	60,833	\$0.20	Aug. 15, 2011
Options	930,000	\$0.63	May 1, 2012
Options	2,875,000	\$0.56	July 31, 2012
Options	762,500	\$0.20	May 1, 2013
Options	3,450,000	\$0.20	May 23, 2013
Options	25,000	\$0.20	July 31, 2013
Total	9,958,333		

(c) Summary of warrants outstanding:

Security	Number	Exercise Price	Expiry Date
Warrants	2,855,000	\$0.30/\$0.40	Aug. 13, 2010
Warrants	20,000	\$0.30/\$0.40	Aug. 18, 2010
Total	2,875,000		

(d) There are no escrowed or pooled shares.

Other Information

The Company's web site address is www.ggldiamond.ca. Other information relating to the Company may be found on SEDAR at www.sedar.com.

Forward Looking Statements

This discussion includes certain statements that may be deemed "forward-looking statements." All statements in this discussion, other than statements of historical facts, that address future production, reserve potential, exploration drilling, exploration activities and events or developments that the Company expects, are forward-looking statements. Forward-looking statements are statements that are not historical facts and are generally, but not always, identified by the words "advance", "expects", "plans", "anticipates", "believes", "intends", "allocated", "estimates", "projects", "potential" and similar expressions, or that events or conditions "will", "would", "may", "could", "should" or are "subject to" occur. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause the actual results to differ materially from those in forward-looking statements include market prices, exploitation and exploration successes, continued availability of capital and financing, and general economic, market or business conditions. Investors are cautioned that any such statements are not guarantees of future performance and that actual results or developments may differ materially from those projected in the forward-looking statements. Forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made. The Company undertakes no obligation to update these forward-looking statements in the event that management's beliefs, estimates or opinions, or other factors, should change.

BY ORDER OF THE BOARD
